<b>1</b>	<b>Introduction</b>	<b>12</b>
<b>2</b>	<b>Background and Research Questions</b>	<b>14</b>
2.1	Impact of Stress on Performance . . . . .	14
2.2	Measurement of Stress . . . . .	15
2.3	Existing Framework for Modeling Cognitive Activities . . . . .	16
2.3.1	Explicit Modeling . . . . .	16
2.3.2	Abstraction Methodology . . . . .	17
2.4	Types of Cognitive Analysis . . . . .	17
2.5	Modeling Decisionmaking . . . . .	18
2.5.1	Normative Decision Models . . . . .	18
2.5.2	Algorithmic Decisions . . . . .	19
2.5.3	Descriptive Decision Making Models . . . . .	20
2.6	Fixation Errors . . . . .	21
2.7	Team Performance under Stress . . . . .	22
2.8	Studies Using Video Recording in the Real Environment . . . . .	23
2.9	Socio-Legal Issues of Videotaping in Real Environments . . . . .	24
2.10	Video Analysis . . . . .	24
2.11	A Framework for Studying Decisionmaking under Stress . . . . .	25
<b>3</b>	<b>Description of Trauma Patient Resuscitation</b>	<b>32</b>
3.1	Trauma Patient Resuscitation . . . . .	32
3.2	Characterization of the Domain . . . . .	33
3.3	Tasks of Airway Management . . . . .	33
3.4	Participants . . . . .	37
<b>4</b>	<b>Acquisition of Audio-Video-Data</b>	<b>38</b>
4.1	Audio-Video Acquisition System . . . . .	38

---

4.2	Overview of Video Acquisition System Network (VASNET) . . . . .	38
4.3	Strengths and Limitations of VASNET . . . . .	40
<b>5</b>	<b>Data Collection in the Real Environment</b>	<b>44</b>
5.1	Consent and Confidentiality . . . . .	44
5.2	Recording of Activities during Resuscitation . . . . .	45
5.3	Companion Data Collection . . . . .	45
5.4	Fatigue Measurement . . . . .	46
5.5	Post-Trauma Questionnaire . . . . .	48
<b>6</b>	<b>Video Analysis</b>	<b>50</b>
6.1	Introduction . . . . .	50
6.2	The Environment for Video Analysis (VINA) . . . . .	50
6.3	Overall Methodologies of Video Analysis . . . . .	51
6.3.1	Intubation Analysis . . . . .	51
6.3.2	Commentaries . . . . .	54
6.3.3	Perceived Subjective Stress Ratings . . . . .	54
6.3.4	Communication Analysis . . . . .	56
6.3.5	Categories of Data Available . . . . .	58
<b>7</b>	<b>Incidents Captured by Video versus Self-reporting</b>	<b>61</b>
7.0.6	Methods . . . . .	62
7.0.7	Results . . . . .	63
7.0.8	Discussion . . . . .	65
<b>8</b>	<b>Systems Factors Influencing Decisionmaking</b>	<b>68</b>
8.1	Workplace Layout . . . . .	68
8.1.1	Introduction . . . . .	68
8.1.2	Experiment 1: Initial Design . . . . .	70
8.1.3	Experiment 2: Layout Efficiency . . . . .	72
8.1.4	Experiment 3: Satisfaction Measure . . . . .	73
8.1.5	Discussion . . . . .	75
8.2	Auditory alarms . . . . .	78
8.2.1	Method . . . . .	78
8.2.2	Results . . . . .	78
8.2.3	Discussion . . . . .	82

---

<b>9</b>	<b>Performance Metrics</b>	<b>83</b>
9.1	Task performance: Are all the steps equally important? . . . . .	83
9.1.1	Task omissions . . . . .	83
9.2	Comparing Performance of Experts with That of Non-Experts . . . . .	85
9.3	Comparison of Elective and Emergency Tracheal Intubation . . . . .	87
9.4	Discussion . . . . .	89
<b>10</b>	<b>Measurement and Prediction of Stress</b>	<b>92</b>
10.1	Post-Case Self-Reports of Stress . . . . .	92
10.2	Determinants of Trauma Anesthesiologists' Perceptions of the Difficulty and Stressfulness of a Case . . . . .	93
10.2.1	Introduction . . . . .	93
10.2.2	Methods . . . . .	93
10.2.3	Data Analysis . . . . .	94
10.2.4	Results . . . . .	96
10.3	Measurement of Perceived Stress . . . . .	97
10.3.1	Characterization of Collected Data on Stress . . . . .	97
10.3.2	Assessment of Interrater Reliability . . . . .	97
10.3.3	Factors of Perceived Stress . . . . .	97
10.3.4	Correlations Among the Measured Variables . . . . .	101
10.4	Regression Analysis . . . . .	101
10.4.1	Temporal Profiles of Stress Ratings Over Time . . . . .	103
10.5	Discussions . . . . .	108
10.6	Measurement of Physiologic Responses to Stress . . . . .	109
10.6.1	Discussion . . . . .	112
<b>11</b>	<b>Decisionmaking under Stress</b>	<b>113</b>
11.1	Fixation Errors . . . . .	113
11.1.1	The Case . . . . .	113
11.1.2	The Evolution of Fixation Errors . . . . .	113
11.1.3	Analysis of Fixation Errors . . . . .	116
11.1.4	Discussion . . . . .	117
11.2	Stress and Performance . . . . .	118
11.2.1	Method . . . . .	120
11.2.2	Results . . . . .	120
11.2.3	Discussion . . . . .	120

---

11.3 Video Analysis of Two Emergency Tracheal Intubations . . . . .	122
11.3.1 Introduction . . . . .	122
11.3.2 Methods and Materials . . . . .	122
11.3.3 Results . . . . .	123
11.3.4 Discussion . . . . .	125
11.4 Prolonged Esophageal Intubation . . . . .	130
11.4.1 Methods and Materials . . . . .	130
11.4.2 Discussion . . . . .	133
11.4.3 Conclusions . . . . .	136
<b>12 Team Performance under Stress</b>	<b>142</b>
12.1 Task Complexity and Team Coordination . . . . .	142
12.1.1 Introduction . . . . .	142
12.1.2 Extraction of Data for Studying Task Complexity . . . . .	143
12.1.3 Analysis . . . . .	144
12.2 Results . . . . .	144
12.3 Components of Task Complexity . . . . .	144
12.4 Implications for Task Complexity in Team Environments . . . . .	148
12.4.1 Coping with Complexity . . . . .	150
12.5 Conclusions . . . . .	151
<b>13 Team Coordination Strategies</b>	<b>152</b>
13.1 Method and Materials . . . . .	152
13.1.1 Data Processing and Video Analysis . . . . .	152
13.2 Strategies of Coordination . . . . .	152
13.2.1 Task Coordination . . . . .	154
13.2.2 Information Flow . . . . .	155
13.3 Coordination Breakdowns . . . . .	155
13.3.1 Pressure to Seek Alternative Solutions . . . . .	157
13.3.2 Initiation of Unexpected, Non-Routine Procedures . . . . .	157
13.3.3 Diffusion in Responsibility . . . . .	157
13.3.4 Summary of Strategies for Team Coordination and types of coordi- nation breakdowns . . . . .	158
13.4 Discussions . . . . .	158
13.5 Conclusions . . . . .	160
<b>14 Models of Decisionmaking</b>	<b>162</b>

# List of Tables

6.1	Task list for tracheal intubation . . . . .	55
6.2	Stressors used in the subjective ratings . . . . .	60
8.1	Principles of Layout (Sanders & McCormick, 1987) . . . . .	71
8.2	The four best and worst rated areas of the TRU bay divided by specialty . . .	75
9.1	Importance scores for tasks in intubation . . . . .	84
9.2	Task durations of intubation events . . . . .	91
10.1	Stress measured by Post Trauma Questionnaire . . . . .	95
10.2	Result 1 of principal components analysis of Stressors . . . . .	95
10.3	Result 2 of principal components analysis . . . . .	95
10.4	Result 3 of principal components analysis of Fatigue Stressors . . . . .	98
10.5	Result 4 of principal components analysis identifies the PTQ items and the factors identified in Table10.4 . . . . .	98
10.6	Result 5 of principal components analysis of Injury Severity . . . . .	98
10.7	Result 6 of principal components analysis identifies the questionnaire (PTQ) items related to the factor identified in Table10.6 . . . . .	98
10.8	Result 7 of principal components analysis . . . . .	99
10.9	Result 8 of principal components analysis . . . . .	99
10.10	The numbers of data points of the collected subjective stress ratings . . . . .	100
10.11	Intraclass correlation coefficients . . . . .	102
10.12	Correlation matrix for the subjective stress ratings . . . . .	102
10.13	Results of principal component analysis. . . . .	102
10.14	Results of multiple linear regression . . . . .	104
10.15	Comparison participant versus neutral raters . . . . .	104
11.1	Pearson $r$ matrix between stress ratings and task omissions and decision-making errors . . . . .	139
11.2	Major events and elapsed time since admission during resuscitation of Case 1140	

---

11.3 Major events and elapsed time since admission during resuscitation of Case 2141	
14.1 Evaluation parameters, and frequency of completion of simulator tasks among ten participants . . . . .	165

# List of Figures

2.1	Implicit cognitive analysis . . . . .	26
2.2	Exemplary analysis method . . . . .	27
2.3	Example of decision tree . . . . .	28
2.4	Rasmussen's decision ladder . . . . .	29
2.5	The recognition-primed decision model by Klein (1989) . . . . .	30
2.6	A framework for studying decisionmaking under stress. . . . .	31
3.1	Means-end representation of the domain of trauma patient resuscitation . . . . .	34
3.2	Admitting area layout . . . . .	34
3.3	Tracheal intubation illustrated by photo and drawing . . . . .	36
4.1	Video image of trauma patient resuscitation . . . . .	39
4.2	Video Acquisition System Network (VASNET) signal flowchart . . . . .	41
4.3	VASNET network structure . . . . .	42
5.1	Practice Synwork scores of five subjects . . . . .	47
5.2	Mean and standard errors of Synwork scores for day and night shifts . . . . .	47
6.1	VINA: An environment for video analysis . . . . .	52
6.2	Overview of database contents and analyses from video data . . . . .	53
8.1	The current Trauma Resuscitation Unit bay layout . . . . .	71
8.2	New bay layout . . . . .	74
8.3	Comparison of subjective satisfaction scores before and after update . . . . .	74
8.4	The Workspace Appropriateness score. . . . .	77
8.5	The duration of auditory alarms from ventilators and end-tidal CO <sub>2</sub> /pulse oximeter monitor . . . . .	79
8.6	The occurrences of false alarms . . . . .	80
8.7	The rate of silenced, false, and missed alarms . . . . .	81
9.1	Task omission, before and after weighting of importance . . . . .	86

---

9.2	Comparison of duration of accomplishing intubation . . . . .	86
9.3	Comparison of number of attempts to accomplish intubation . . . . .	88
9.4	Percentage of task completed before, during and after intubation . . . . .	88
10.1	Comparison of temporal stress profiles with different alignment points . . . . .	105
10.2	Task urgency and stress temporal profile . . . . .	106
10.3	Temporal profile of seven measured items of stress. . . . .	107
10.4	Electrocardiograms of an anesthesiologist during elective and emergency intubations . . . . .	110
10.5	Heart rate and blood pressure of an anesthesiologist from an ambulatory monitor . . . . .	111
11.1	Case event overview: esophageal intubation . . . . .	114
11.2	Prolonging the window of opportunity through pre-oxygenation . . . . .	121
11.3	Correlational relationship between performance and stress ratings . . . . .	121
11.4	Recommended task communication algorithm for airway management . . . . .	138
12.1	Comparison of two types of intubation: high versus low urgency . . . . .	145
12.2	Monitoring information available during low and high urgency intubation . . . . .	146
13.1	Sample analysis results of verbal communications . . . . .	153
13.2	Flow patterns of verbal communication . . . . .	156
13.3	Coordination breakdowns when team encountering unexpected obstacle(s) . . . . .	159
13.4	Coordination breakdown pattern: change in plans . . . . .	159
14.1	Ideal and actual action sequence in the real case . . . . .	163
14.2	Comparison of paths of action sequences taken in real events and in simulated events . . . . .	165
14.3	Differential diagnoses made by simulator participants after endobronchial intubation . . . . .	168
14.4	Hypertension decision tree . . . . .	169
14.5	Patient vital signs and decisionmaking . . . . .	170
I.1	Post Trauma Questionnaire (PTQ) . . . . .	190
I.2	Intubation Analysis Questionnaire (IA) . . . . .	192
I.3	Stressor Collection Form . . . . .	203
I.4	Recall Questionnaire . . . . .	204
II.1	Coding System for Verbal Communications and Activities . . . . .	206
III.1	Transcriptions of the verbal communication and codings for the example case . . . . .	212

---

III.2	Transcriptions of the commentaries by the attending anesthesiologist who participated in the care in the example case . . . . .	220
III.3	Transcriptions of the commentaries by an anesthesiologist who did not participate in the care in the example case . . . . .	223
III.4	Patient admission record for the example case . . . . .	227
III.5	Intraoperative anesthesia record for the example case . . . . .	228
III.6	Laboratory analysis, hematology, and biochemistry data for the example case	230
III.7	Operative and discharge summary for the example case . . . . .	237
III.8	Fluid infusion records for the example case . . . . .	241
